
OBJECTIVE:

Senior Full Stack Developer with 4+ years of experience building scalable web applications, serverless architectures, and AI powered automation tools using JavaScript, Node.js, React.js, AWS, and GenAI frameworks, with end-to-end ownership from system design to deployment and a strong focus on performance, security, and user experience.

SKILLS:

Languages & Frameworks: JavaScript (ES6+), Node.js, React.js, Typescript, Next.js, Express.js, Serverless Framework, Polar Payment, Stripe Payment Gateway, HTML, CSS, Tailwind CSS, Material UI, OAuth, JWT, RESTful APIs, GraphQL, Docker, MERN.

Databases & Tools: MySQL, MongoDB (NoSQL), Prisma (with MySQL), CI/CD, GitHub, Docker

Cloud & Services: AWS (Lambda, S3, API Gateway, CloudWatch, SNS, SSM, Appsync, Amplify, IAM, ECS, SQS, SES, SNS)

AI Tools & Frameworks: Cursor, Antigravity, Langgraph, Langchain, GenAI

WORK EXPERIENCE:

Forzo TechLabs | FULLSTACK with AI INTEGRATION DEVELOPER | Forzo-flow | Chennai | September 2025 – Present:

- Architected and developed ForzoFlow, a LinkedIn-approved automation platform enabling users to create and schedule posts, manage comments, and format content via a Chrome extension and web app. integrated Polar Payment Gateway for subscription billing and built the full serverless backend on AWS Lambda and API Gateway to handle multi-tenant user workflows at scale.
- Designed and implemented LangChain and LangGraph-powered AI workflows to automate intelligent content generation and task orchestration pipelines. built GraphQL APIs and integrated free LinkedIn productivity tools to simplify content operations, reducing manual effort across the platform.

Forzo TechLabs | FULLSTACK with AI INTEGRATION DEVELOPER | Carboventory | Chennai | September 2025 – Present:

- Built the Carboventory carbon emission tracking platform where businesses list their store products and the system identifies the industry average and refurbished emission values to calculate carbon savings. When no public data is available, Caly AI generates the emission figure using AI prompts, with Tavily powering source search to surface verified proof for each product calculation.
- Developed the full stack using React, Node.js, and AWS SQS for async processing pipelines, with AI prompt engineering for carbon emission calculations, Tavily integration for source verification, and Excel extraction for product-level carbon reporting

Forzo TechLabs | FULLSTACK DEVELOPER | E-Check Insurance | Chennai | May 2023 – Present:

- Built and owned end-to-end a multi-role insurance comparison and dealership management platform with Super Admin, Manager, and Employee logins by handling everything from requirement gathering, development, and testing to production releases with zero delays. The Super Admin manages dealership onboarding, subscription lifecycle, and user access (create, activate, deactivate)
- Implemented a secure customer verification workflow using the Canopy API, allowing managers and employees to verify customers, associate with multiple dealerships, manage vehicle and provider selection, and store all verification documents in a centralised dashboard. Enforced role-based access control (RBAC) with JWT authentication across all user roles.

Mobius Knowledge and Services | MERN STACK DEVELOPER | On the Stage | Chennai | March 2022 – April 2023:

- Developed and integrated Stripe Payment Gateway and RESTful APIs using Node.js and Express.js to support end-to-end ticket purchasing workflows, including real-time event scheduling, seat selection, and secure transaction handling on an online ticketing platform.
- Built responsive React.js UI components for event listing, ticket booking, and user dashboards. optimized frontend performance and implemented real-time notifications to improve user engagement across the event management experience.

CERTIFICATIONS:

- LangChain, LangGraph, AWS Cloud Practitioner(CLF-CO2), Git and GitHub,

EDUCATION:

Einstein College of Engineering
BE(EEE) – 8.49 CGPA

2018 - 2022
